

# Expedition to Aragats 5 September 2023

Changing the board of SEVAN Aragats analogical to Zugspitze (with possibilities to measure energy spectra). Now seen in ADEI as SEVAN Burakan!

Who remember this detector?

ASNT was tuned and calibrated in service 20 years!

CUBE and STAND3 detectors operate on nanosecond to minute time scales to research the space temporal structure of TGE and measure electron and gamma ray energy spectra.

# Karen Asatryan and Lev Kozliner tuning NaI spectrometers

Magnet brought from Germany in 1945, and a new lab with the electric field sensor, weather station, and 2 all-sky cameras prepared for hosting international teams with advanced particle detectors.
